1 The Swiss import and export regulations for processed agricultural products

1.1 Introduction

Switzerland's agricultural policy regime aims at a sufficient domestic production of some important basic agricultural products. Due to higher production costs in Switzerland, the producers of processed agricultural products are often faced on the domestic market with higher prices for the relevant raw materials than on the world market. As the price for the agricultural raw materials in a processed product constitutes an important part of the final price for that product, these producers are put at a competitive disadvantage compared to competitors in countries where these materials can be sourced at lower prices.

In order to promote competitive conditions for these domestic producers, Switzerland applies *price compensation measures*, with the aim of equalising the difference between the domestic and the world market prices for the raw materials incorporated in processed agricultural goods. This ensures the domestic food processing industry a level playing field to compete with foreign companies on the domestic market as well as the export markets.

The Swiss price compensation scheme consists of measures on imported and exported products.

1.2 Import regulation

With respect to imports, the policy of price compensation measures consists of the levying of a duty comprising an agricultural and industrial element. The agricultural element aims at equalising the differences between the prices for the relevant agricultural raw material in a processed product on the domestic and on the world market. In addition to the agricultural element an industrial element is added which provides a certain industrial protection. However, on imports from countries with which Switzerland has concluded free trade agreements covering processed agricultural goods, the industrial element is usually not levied.

Processed agricultural products covered

In the nomenclature of the Harmonised System, the Swiss import regulation is applied to goods classified in chapters 4 (yoghurt, dairy spreads), 15 (margarine) 17 (sugar confectionery), 18 (chocolate and other food preparations containing cocoa), 19 (pastrycooks' products and preparations of cereals, flour, starch or milk), 20 (preparations of vegetables, fruit, nuts, or other parts of plants), 21 (other food preparations).

See Annex I: List of processed goods covered by the price compensation system

Raw materials concerned

For the calculation of the agricultural elements, Switzerland considers only those raw materials covered by the agricultural policy regime and for which the prices on the domestic market and the world market can be established without difficulty.

01/06/2012

The following raw materials are relevant for the calculation of the agricultural elements:

- milk products (whole milk powder, skimmed milk powder and butter)
- grain and grain products (common wheat, durum wheat, rye, barley, maize and wheat flour)
- eggs
- fresh potatoes
- vegetable fats
- white sugar

The representative market prices on the domestic and the world market (reference prices) which are the basis for the price compensation measures are established by the Federal Office for Agriculture and published by the Directorate General of Customs.

Calculation of customs duties based on standard recipes

As described above, the duties on processed agricultural products to which price compensation measures are applied, consists of two elements: an industrial element and an agricultural element.

The agricultural element is calculated according to a standard recipe. The standard recipe defines for each category of comparable products the amounts of incorporated raw materials. The standard recipe is defined at the national tariff line level of the Swiss Customs Tariff. These standard recipes are reviewed periodically with a view to avoid over- or under compensations.

See Annex I: List of processed goods covered by the price compensation system

In general, the agricultural element is calculated once a year depending on the development of the prices for the relevant raw materials on the domestic market and the world market.

For current applied duty rates, please check: Synoptic table of WTO consolidations and duties applied as of Feb. 1st, 2012 (<http://www.efta.int/~media/Documents/legal-texts/free-trade-relations/protocols-and-annexes/26303v3Swissinformationonprocessedagriculturalproducts.ashx>)

Legal basis

The Swiss import regulations are based on the Federal Law of 9 October 1986 on the Customs tariff (http://www.admin.ch/ch/f/rs/c632_10.html), on the articles 1 and 2 of the Federal Law of 13 December 1974 on the importation and the exportation of processed agricultural products (http://www.admin.ch/ch/f/rs/c632_111_72.html) and on the Ordinance of 23 November 2011 on industrial elements and the agricultural elements upon the importation of processed agricultural products.

1.3 Export regulation

With respect to exports, the Swiss policy is based on the same principle, namely to equalise the differences between the prices for the relevant agricultural raw material in a processed product on the domestic and on the world market with a view to ensure the domestic food processing industry a level playing field to compete with foreign companies on the export

01/06/2012

markets. So, measures upon export consist of granting refunds corresponding to these price differences according to the raw materials actually utilised.

Processed agricultural products covered

Processed agricultural products falling under HS chapters 15 to 22 of the Swiss Customs tariff and containing the relevant raw materials, as listed below, are eligible for refund upon export.

Raw materials concerned

The agricultural raw materials for which export refunds are granted are the following:

- milk products (fresh milk, fresh cream, whole milk powder, skimmed milk powder, cream powder, condensed milk, condensed skimmed milk and butter)
- flour and other products of the milling industry as well as germs of wheat, mixed corn, rye and triticale

Calculation of export refunds based on real content

The export refunds are calculated on the quantities of raw materials used for the manufacturing of the processed goods. Contrary to the import regulation, where standard recipes are applied, the export refunds are calculated on the basis of the real amount of the above mentioned raw materials incorporated.

The export refunds for milk products depend on the content of milk-fat and milk-protein and are derived from the price differences on the domestic and world market for skimmed milk powder, whole milk powder and butter.

The differences on the domestic and world market determining the level of export refunds are reviewed on a regular basis and adjusted accordingly in order to avoid over- or under compensation.

Legal basis

The Swiss export regulations are based on the Federal Law of 9 October 1986 on the Customs Tariff (http://www.admin.ch/ch/f/rs/c632_10.html), on articles 3 and 4 of the Federal Law of 13 December 1974 on the importation and the exportation of processed agricultural products (http://www.admin.ch/ch/f/rs/c632_111_72.html) and on the Ordinance of 23 November 2011 on the export refunds for processed agricultural products (http://www.admin.ch/ch/f/rs/c632_111_723.html).

1.4 Relation with the EU

Switzerland's trade with the EU of processed agricultural products is covered by Protocol N° 2 of the Free Trade Agreement 1972 between Switzerland and the EU, which has been revised in 2004 and entered into force in 2005.

The Protocol N° 2 covers products that are subject to price compensation measures (Table I) and duty free products (Table II). For products listed in Table I, the price compensation measures for products traded between Switzerland and the EU depend on the difference

01/06/2012

between the domestic market prices in Switzerland and the EU market prices of the relevant raw materials. As the market prices in the EU are in general lower, the EU abolishes all its price compensation measures in trade between Switzerland and the EU for as long as EU market prices for the relevant raw materials remain below the Swiss market prices).

2.2 Annex II: Export regime

As of February 1st 2012, the export contribution rates of the following basic agricultural products are shown below.

Basic milk products:

	0401.	20 10/20 90 50 20	Milk and cream	
	0402.	10 00, 21 11/21 19 21 20	Milk powder and cream powder	
ex	0402	91 10, 99 10	Condensed milk	
	0405.	10 11/10 99 90 10/90 90	Butter	

Applicable rates in CHF per 100 kg for basic milk products whose milk fat to milk protein ratio is less than 1.04:

Milk fat constituents	735.40
Milk protein constituents	379.00

Applicable rates in CH per 100 kg for basic milk products whose milk fat to milk protein ratio is greater than 1.04:

Milk fat constituents	812.00
Milk protein constituents	299.30

Flour and other milled products

1101.	00 43, 0048	Flour of wheat, spelt, rye and meslin	49.25
1102.	9044		
1103.	11 99, 1919	Other milled products of wheat, spelt, rye and meslin	49.25
1104.	19 19 2913, 2918		
1104.	30 89	Germs of wheat, rye and meslin	28.80
